

Sasol's 10 and 50ppm Sulphur diesel offerings have market leading quality and contain the most powerful diesel performance additive in South Africa:

Comparative tests at Sasol's R&D facilities have shown our additive formulation to clean up dirty diesel injectors and reduce fuel consumption by up to 3,5%,

Our advanced performance additive is also very effective against a phenomenon known as diesel sticking, to prevent costly repairs to failed diesel injectors or damaged engines,

Coupled with its low Sulphur content, Sasol diesel can help to extend oil drain intervals resulting in less downtime and greater vehicle availability; in the case of one customer fleet, this benefit was quantified to be more than 120 additional operating days with savings in maintenance costs in excess of R1m,

All our diesel products have excellent diesel lubricity to prolong diesel pump and injector life; protect against corrosion of fuel tanks and fuel system components; ensure cold temperature operability; and reduce diesel fuel foaming for faster, cleaner fuel tank filling and prevention of diesel spills,

Sasol's 10 and 50ppm Sulphur diesels are coloured purple which serves as a unique guarantee and peace-of-mind assurance that our customers are getting an authentic product with all the promised benefits.
